

Next Generation Energy Event Successfully Concludes in Bangkok, Thailand

Bangkok, Thailand – 15 August 2024 – The Next Generation Energy event has wrapped up with resounding success, bringing together over 100 industry leaders, experts, and innovators from across the globe to discuss the future of energy management and sustainability in the glass and façade industry. Held in the vibrant city of Bangkok, this landmark event served as a pivotal part of Glasstech and Fenestration Asia for the exchange of groundbreaking ideas and solutions that are set to redefine the construction and building sectors.

Over the course of the event, attendees engaged in transformative discussions and insightful panels, all centered around the critical themes of sustainable practices and the role of advanced glass technologies in shaping tomorrow's built environment. The event featured keynote speeches from Mr. Watcharin Bunrit, Director of Solar Energy Development Division from the Ministry of Energy of Thailand, and Dr. Adis Israngkura from Thailand Development Research Institute (TDRI), who shared about Thailand on the road to sustainability, climate change impact and sustainability development.

"In Thailand, nearly 70% of our CO2 emissions come from energy use, primarily from fossil fuels. To combat this, we must significantly enhance our energy efficiency and more effectively integrate renewable sources like solar and wind. Our key goal is to increase renewable energy to 50% of our total energy mix by 2050," said Mr. Watcharin Bunrit.

The event also provided a unique networking opportunity, fostering connections between professionals and organizations committed to driving sustainability in the construction industry. Attendees left with valuable insights, new partnerships, and a renewed commitment to implementing sustainable building practices in their respective fields.

“Next Generation Energy has been an outstanding success, both in terms of the topics covered and the caliber of speakers,” said Mr. Gan Pay Yap, Chairman of the Singapore Glass Association. “The event provided us with invaluable insights that go beyond what’s typically available through mainstream media and standard analytical reports. The presence of major industry players and thought leaders further underscores the quality and impact of this gathering, making it a truly remarkable event.”

Join Us at Glasstech and Fenestration Asia 2024

As we celebrate the success of the Next Generation Energy event, we invite you to continue the journey towards innovation and building sustainability at **Glasstech and Fenestration Asia 2024**. Set to take place 11-13 December 2024, at Ho Chi Minh City, Vietnam, this premier event will offer a deeper dive into the latest industry innovations and provide unparalleled opportunities for knowledge exchange and networking. Don’t miss out on the chance to be part of this transformative experience.

Register now and join us in shaping the future of the glass and façade industry.
